## About

I'm a React Native developer with a passion for creating mobile applications that are not only functional but also visually stunning. Over time, I've become proficient in different technologies such as React Native, JavaScript, and Node.js. As a developer, I love to collaborate with designers, product managers, and other developers to deliver high-quality applications that solve real-world problems.

Outside of programming, I'm a musician at heart. I have a deep love for playing guitar and piano. Being a musician has taught me valuable skills like creativity, discipline, and perseverance, which I bring to my programming work.

## Work Experience

### Kompanion / React Native Developer

MAY 2023 - PRESENT

### Akinon / React Native Developer

NOVEMBER 2022 - MAY 2023

- Contributed to the development of over 30 mobile applications using React Native.
- Conducted code reviews to ensure code quality, maintainability, and scalability.
- Worked closely with cross-functional teams, including product managers, designers, and other developers to deliver high-quality mobile applications.
- Involved in app store and Google Play processes, ensuring apps met all submission requirements and were successfully published.
- Participated in daily stand-ups and retrospectives to continuously improve development processes and workflows.
- Resolved technical issues and bugs, ensuring timely delivery of projects.

### Wunder I.S. / React Native Developer

APRIL 2021 - NOVEMBER 2022

- Developed and maintained multiple mobile applications using React Native, including Sigortam Cepte, Juno and Magnus.
- Contributed to the development of backend projects using Nest.js, ensuring seamless integration with the mobile applications.
- Collaborated extensively with designers to ensure that the mobile applications met business requirements, user needs, and design standards.
- Generated new ideas and contributed to the ideation process for new mobile applications and features.

## Skills

 Typescript
 React.js
 React Native
 Node.js
 MongoDB

## Side Projects

### Tandır

Tandır is a dating app where you can meet people who likes to eat certain type of food, Lahmacun for example. The app is written with React Native and I've tried several different things such as chatting feature. It has a Node.js backend.

Source Code

### Gpt Assistant

This is some kind of a layer in front of OpenAI's ChatGPT. It allows users to interact with ChatGPT for their spesific use cases. There is limited token usage for API but users can register their own API key and play with different settings of ChatGPT. Written with React + Typescript, Node.js in the backend. Also used Firebase auth and Firestore.

Source Code      Live

### afetharita.com (Open Source)

Following the destructive earthquakes on February 6th, my desire to assist as a developer led me to become a part of the afetharita open source project. I hold the 11th position among numerous contributors in the project. This project is implemented using Next.js.

## Education

### Uludag University / Bachelor Degree BS, Psychological Counseling

2018, BURSA/TURKEY

My educational background in psychology has given me a unique perspective and approach to problem-solving, communication, and teamwork, which I believe have been invaluable in my career as a software engineer. Overall, while my path to becoming a software engineer may have been unconventional, I am confident that my diverse educational background and passion for technology have contributed to my success in this field.
